Description

Description

Gardening Assistant

Green Thumb is a home gardening application designed to assist home gardeners with tracking and finding new plants for their gardens.

Description

API Support

Green Thumb uses plant data from the Perennial API to allow users to search for plants with certain traits and add these plants to their digital gardens.

Tools Used

Tools We Used:

5/5 Node.js – Application Server

4/5 Express – Framework

4/5 Docker – Containerization

5/5 PostgreSQL – Database

4/5 Handlebars – Templating

4/5 Mocha/Chai – Testing

Tools We Used:

2/5 Render-Cloud Hosting

4/5 GitHub-VCS/Project Tracker

5/5 VS Code - IDE

3/5 Perenual - API

Tools We Used:

5/5 DaisyUI-CSS

4/5 Tailwind - CSS

4/5 Figma - Wireframe

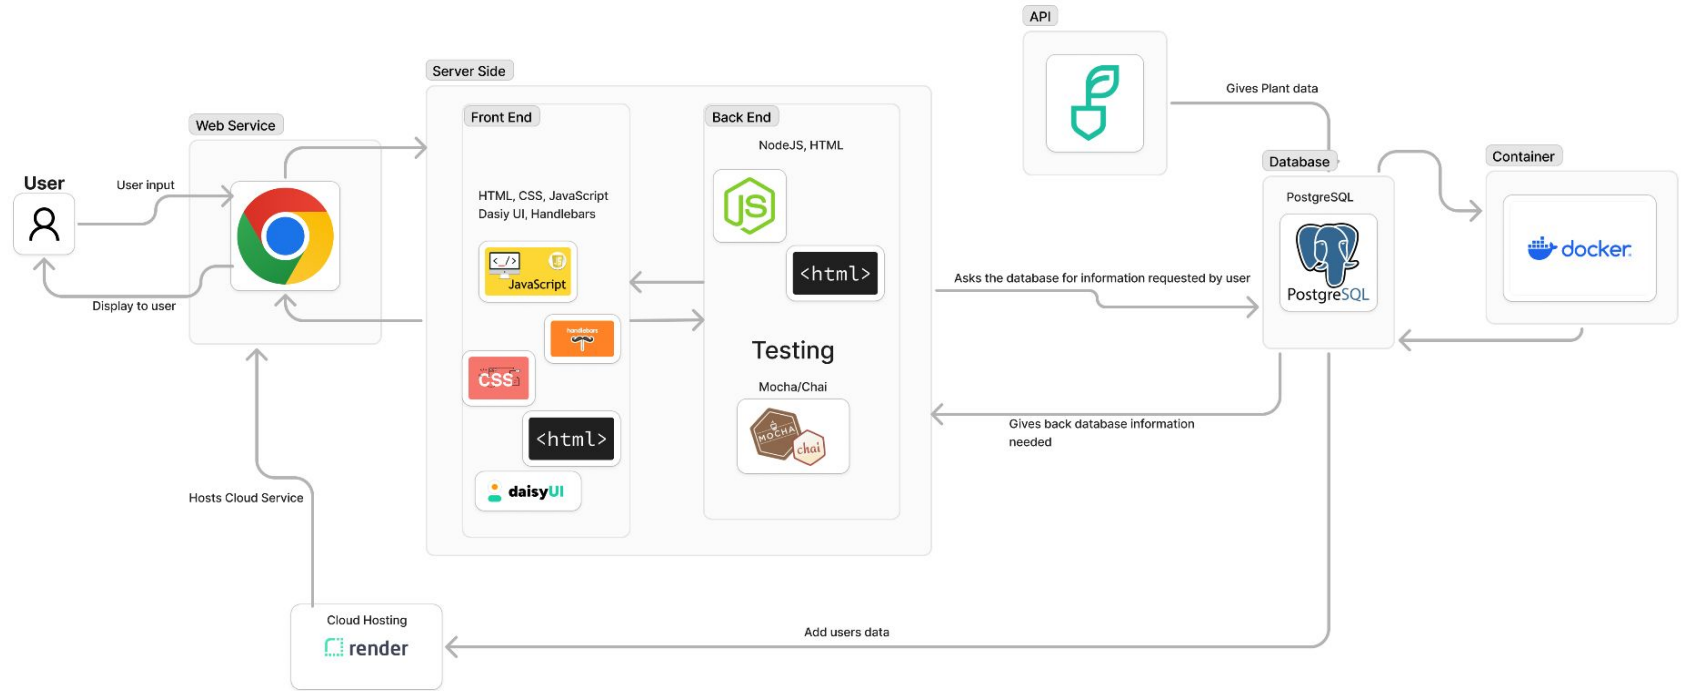

5/5 Discord - Communication

Future Scope

Key Enhancements

Purchase Linking

Help user get access to their interested plants, website will link plants with retail store link amazon or walmart.

Plant Identification

Implement a feature which would allow users to identify a plant with just a photo.

UI/Aesthetic

Integrate dynamic UI and add decorations to improve aesthetics.

Demo
